

EDUCATION

Allegheny College
Bachelor's of Science in Software Engineering

Meadville, Pennsylvania

SKILLS

Languages: Python, R, SQL, VBA, TypeScript, JavaScript, C++

Technologies: Databricks, ELT Pipelines, Postgres, Azure, Docker, REST APIs, CI/CD, Git, React, Angular, FastMCP

EXPERIENCE

Data Analyst | YouthPlaces, Pittsburgh, Pennsylvania

Oct 2025 - Present

- Wrote SQL queries to build an administrative dashboard tracking attendance, site comparisons, and enrollment versus participation, giving leadership a single reference point for program decisions.
- Automated end-of-year and recurring reports using Python, combining program data with student narratives to track outcomes across multiple fiscal years.
- Cleaned and restructured enrollment and attendance data into a central dataset, documenting the process and adding a review step to improve data accuracy.
- Wrote a recommendations report identifying data quality issues and reporting gaps, proposing process improvements for the following year.
- Compared claims management systems by cost and workflow impact to reduce staff paperwork while maintaining USDA compliance.
- Coordinated with Computer Reach on a Northside youth digital literacy program, managing device requirements and student eligibility verification across program partners.

Cloud Adoption Intern | MobiLab Solutions, Cologne, Germany

Summer 2025

- Automated data ingestion, transformation, and loading into Databricks using Python scripts and ELT pipelines, improving analytics reliability and reporting readiness.
- Built semantic models and knowledge graphs connecting client data sources to cloud infrastructure, supporting migration efforts and cross-team collaboration on data architecture.
- Developed and deployed an MCP agent to translate text instructions into cloud infrastructure changes within a containerized Azure environment, using infrastructure-as-code to standardize deployments and accelerate the transition from on-premises systems.
- Built an internal MCP agent to test protocol integration within existing company systems, validating tool and system performance against simulated real-world scenarios to supplement user reports and unit tests.

Post Processing Intern | Acutec Precision Aerospace, Meadville, Pennsylvania

Summer 2024

- Developed reporting tools and automated ELT processes using VBA and Python, saving over 1,000 hours of labor.
- Automated sensor data collection and analytics using Python and C++ to track industrial oven performance, consistency, and anomalies across usage cycles.
- Implemented an anomaly detection and alert system using Python to flag abnormalities in production data, reducing defects and operational risk.

IT Technician | Information Technology, Allegheny College, Meadville, PA

Aug 2023 - May 2025

- Trained and supervised student employees while delivering technical support to 1,000+ users, troubleshooting hardware and software issues across Linux, macOS, and Windows environments.
- Resolved network and firewall issues across academic and residential facilities and conducted a campus-wide network audit to improve reliability and reduce outages.
- Managed the esports lab and wrote scripts to update and enforce Windows policies across managed systems.

Teaching Assistant | Allegheny College, Meadville, PA

Aug 2023 - May 2025

- Tutored undergraduate students in software engineering and data science courses, held office hours, and graded assignments.
- Hosted a community workshop series introducing computer science to faculty, staff, students, and the public.
- Led development of our digital educational tools, including ExecExam and GatorGrade, automated grading tools, and a data science website with structured lessons and practical exercises.
- Presented on CI/CD-based automation for course infrastructure at the PyCon US 2025 Education Summit.
